## THINGS TO CONSIDER BEFORE YOU SIT DOWN

### WHAT MAKES ALL THE DIFFERENCE

**Start with the frame:** All our frames are 100% kiln dried Australian Hardwood, grown in Tasmania and manufactured in Melbourne to specific HSF's Design.

Each joint is secured with dowels and corner blocks and has a 10 year guarantee; once the frame is fully upholstered there will be no evidence of the timber beneath the upholstery when sitting on the furniture.

**Spring into action:** For the seating of our furniture we use either nine-gauge hour-glass steel springs which are hand tied and supported at the base of the piece by basket-weave jute webbing. The other method we use is no-sag steel sprigs which are tied together by a steel spear.

For the back of the chair or sofa we use no-sag springs which forms a very comfortable back support, we also build in a lumbar support for the lower back region. Our furniture is all customized for individual client's needs thus enabling them to sit comfortably with the appropriate support.

**Forming the comfort factor:** Once the spring system is in place, a layering effect takes shape, this creates the comfort level of each piece of furniture. Heavy duty hessian is laid over the springs, this is a loose woven fabric which prevents the constriction of the spring movement and is fixed into place before a sandwich-style process begins. Wadding is then laid over the hessian and is followed by high grade foam and finally polyester fibre; this all takes place before the covering fabric is considered.

**Shaping & Padding:** At this stage the chair or sofa is taking on a particular design look so attention to detail is imperative, the layering effect starts again and will give the back and arm definition and character.

**Seat Options:** We offer various seat options from 100% Goose Down to the best quality foam. Whichever choice you make comfort and quality for our customers is our number one concern at Highly Sprung Furniture.
